

HYBRID 228

Terranova
SEEDS

Hybrid Cabbage

Very good field holding potential over Winter

- Excellent uniformity with low sib count
- Very good disease resistance
- Bright green colour; flat, round shaped heads. Some purpling (anthocyanin) on top will occur in cold conditions
- Vigorous grower with good field holding ability. Best suited to Autumn and Winter harvest
- Average head weight 2.5 to 3.5kg
- Large frame size and good cold tolerance

Proven Performer for many years

Additional comments and cultural notes

Responds well to a good base fertiliser programme to allow rapid frame growth and side dressing to complement the base dressing allowing steady growth through to maturity.

Typical crop removal of major elements for a 50T/ha cabbage crop are 147kg N, 24kg P and 147kg K per hectare. Under Winter conditions leaching of nutrient is a significant factor, root activity is slow and maybe shallow. For these reasons high rates of base fertiliser have given good results with Hybrid 228 over Winter.

For further information consult your local Dealer, seedling nursery or Terranova Seeds representative
